

See and Be Seen

Make sure you have your lights switched on when driving during the night or during poor visibility.

When riding at night, cyclists and e-scooters must have a working white light to the front and working red light to the rear. They should also wear bright colored clothing.

Before driving, carry out a check of all lights to make sure that they are working and in order. Replace broken lights as soon as possible.

Please watch this short video with additional road safety tips for driving at dusk and dawn.
