

Safe Reversing

During 2022, 34% of motor vehicle accidents within KAUST occurred when a vehicle was reversing.

To reduce the number of reversing accidents:

1. Ensure that you have adjusted your mirrors before starting your journey.
2. Walk around the vehicle and look for obstacles or hazards before moving.
3. Reverse slowly when it is safe to do so– turn your head, use your mirrors and check both sides.
4. Avoid reversing over a long distance.
5. When parking in a driveway or suitable car parking space, reverse into park so that you can drive forward when exiting.
6. Ask another person to assist if your vision is obstructed.
7. Remember that reverse cameras and sensors are an aid to reversing and should not be relied upon 100%.
